

InterLinx Setup Form

Before attempting to install InterLinx on to your equipment, it is strongly recommended that you collect the necessary configuration information by completing this form.

1. Activation Code

To get your InterLinx Activation Code, visit <http://register.twfinternet.com>. Be ready with your primary domain name, dongle ID (found printed on the dongle) and your contact details.

Primary Domain Name					
Dongle ID					
Activation Code					

2. LAN Settings

Consult the InterLinx Installation Guide in-order to complete this section.

IP Address	
Subnet Mask	

3. WAN/Internet Connection

This is how your InterLinx is to be connected to the Internet. You can either use a dialup ISDN service or an Ethernet-based service such as a leased-line, DSL, cable modem or satellite.

Consult the InterLinx Installation Guide in-order to complete the section.

ISDN Configuration		Ethernet Configuration	
Dialup Account Name		Use DHCP (yes/no)	
Password		IP Address	
My ISDN Number		Subnet Mask	
Primary ISP Number		Network Address	
Secondary ISP Number		Broadcast Address	
IP Address		Gateway/Router Address	
Point-to-Point Address			

4. DHCP (Dynamic Host Configuration Protocol)

If you want InterLinx to provide a DHCP (simple, automatic client TCP/IP configuration) service for your network, you need to enter a range of LAN IP address that it can use to give to machines requesting an address.

Start Address	
End Address
