

# InterLinux

The Complete Networked Internet  
Solution that Puts YOU in Control

Email for everyone available  
anywhere

High speed web access with  
monitoring, blocking and filtering

Remote access via encrypted VPN

Strong secure firewall

## THE SMARTEST WAY TO CONNECT YOUR LAN TO THE INTERNET

InterLinux turns any standard PC into a sophisticated Internet gateway server offering reliable Email, secure firewalling, powerful activity monitoring, high-speed web caching and excellent virtual private networking.

Designed for demanding environments, InterLinux represents the next generation in networked Internet access.

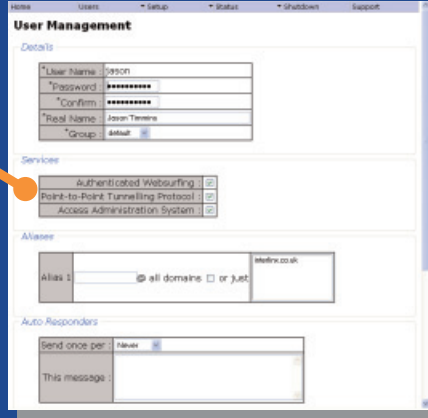

# The Complete Networked Internet Solution that Puts YOU in Control

With InterLinx and its powerful Linux technology, it is easy to control and manage Internet access for your entire organization. InterLinx acts as a powerful Email server for your LAN, it monitors and records all web browsing activity, it allows remote access to your network using high-security Virtual Private Networking and it protects your network thanks to its world-class firewalling technology.

### Control Your Users

Manage and control your users, their Email addresses, VPN access and web surfing.

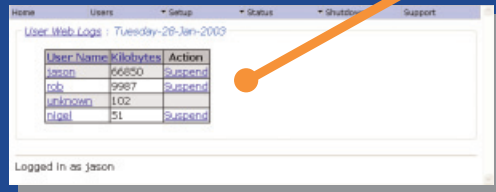

### Easy to Use

Web-based management system makes controlling InterLinx simple and easy.

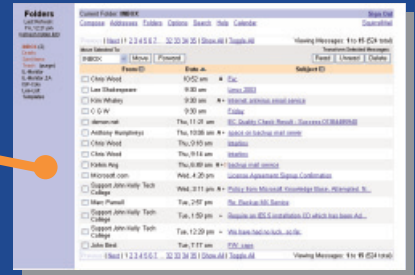

### Monitored Web Browsing

See the web browsing activity of every user, suspend users if required and block inappropriate web sites.

### Web-based Email

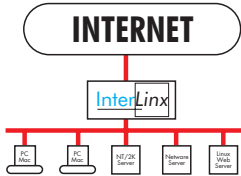

Access your Email from any web browser anywhere in the world via InterLinx Web-based Email. All traffic encrypted using 128-Bit SSL encryption.

### What is InterLinx?

InterLinx is a software solution for connecting your Network to the Internet. It connects between the LAN and the ISP, forming a barrier between the Internet and your private network. InterLinx is a very secure firewall and protects your entire network from external attacks. InterLinx also acts as a powerful internal and Internet Email server, a caching web proxy (with blocking, filtering and activity monitoring), an intranet server and a VPN server (which allows remote users to securely access your network from the Internet.)

The InterLinx software installs on to a standard PC and is managed with a web browser.

Along with blacklist and whitelist functionality, there is also support for Secure Computing's SmartFilter, which allows groups of users to have broad types of sites blocked using this vast database of categorized web pages.

### Email Server

With its powerful Email server, InterLinx is capable of supporting the internal and Internet Email requirements of hundreds of recipients. It has full multi-domain support, advanced Email routing/forwarding, intelligent auto-responder messages, anti-spam technology and Email content filtering.

InterLinx is a full SMTP Smarthost with multi-drop POP3 support. Email can be accessed using POP3, IMAP, IMAP over 128-Bit SSL and via an intuitive web-based Email service.

### Web Access

InterLinx provides fast, reliable web access in a highly configurable and controlled way. Using at-least 1Gb of disk space to cache all web content makes web browsing extremely fast. InterLinx also monitors the activity of every user and reports this to the administrator on a daily basis.

### Firewall

InterLinx removes much of the hassle associated with managing a firewall by putting in-place a number of pre-defined rules that are adequate for the needs of most organizations. However, the InterLinx Admin system also allows for custom written rules using a simple user interface. InterLinx also includes full DMZ support, network address translation and port forwarding.

### Virtual Private Network

Full support is provided for both the PPTP and IPsec VPN protocols. This allows remote users or entire offices to connect to the central LAN via an encrypted Internet link.

### Connectivity

InterLinx connects to your ISP using ISDN or any service delivering an Ethernet Internet feed (such as ADSL, Leased-line or Cable Modem.)

ISDN dialing has sophisticated scheduling whilst the Ethernet connection supports speeds up to 100Mbit/s.

### Installation

Installation of the software on to your equipment is very simple. Easy to follow instructions are included and the default configuration is appropriate for 90% of organizations.

### Reliability

InterLinx is an extremely reliable solution that is tightly focused on its designed task.
